Reasons for allowance

1. This communication is in response to applicant's communications filed on 11/23/2010 in the application of Dabak et al. for the "Multi-carrier reception for ultra-wideband (UWB) systems" filed 08/25/2003 has been examined. This application claims priority from provisional application 60/409,662 filed 09/10/2002. This application is a Request for Continued Examination (RCE) under 37 C.F.R. 1.114 filed on February 27, 2008. Applicant's response has been entered and made of record. The claims have been amended to better point out and more distinctly claim subject matter comprising the invention.

2 Claims 1-26 are allowable as evident by applicant's amendment.

3. The following is an examiner's statement of reasons for allowance: The instant application is deemed to be directed to a nonobvious improvement over the invention patented in closest prior arts of record. The improvement comprises a receiver comprising: an analog section coupled to a signal input, the analog section containing circuitry to filter and amplify a signal received at the signal input; an analog-to-digital converter (ADC) coupled to an output of the analog section, the ADC to convert an output of the analog section into a digital symbol stream; and a digital section coupled to an output of the ADC, the digital section comprising a redundancy elimination circuit (REC) coupled to the ADC, the REC containing circuitry to remove redundancies inserted into a digital symbol; a despreader coupled to an output of the REC, the despreader containing circuitry to apply a second spreading code to a digital symbol,

one digital symbol at a time; and an orthogonal frequency division multiplexing (OFDM) demodulator coupled to an output of the despreaders, the demodulator containing circuitry to remove modulation applied to the digital symbol; wherein there are a plurality of ADC and digital sections forming a plurality of ADC and digital units (ADU), and the receiver further comprising a plurality of filters and mixer units, wherein each filter and mixer unit has an input coupled to the analog section and an output coupled to an ADU, the filter and mixer unit containing circuitry to extract a frequency band from a signal provided by the analog section and to mix the frequency band to an intermediate frequency, as specifically recited in claims.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
